Automotive Marketplace Case Study

Helping Fortify Digital Frontiers

"HancoCyber's service transformed our security operations. False positives are a thing of the past, and our efficiency has soared."

Managed Detection and Response (XTI)

Discover how HancoCyber revolutionised cybersecurity operations through its Hanco CyberShield 24/7 SOC service. With eXtended Threat Intelligence (XTI) and Monitoring, we proactively detect, investigate, and mitigate cyber threats, ensuring robust protection for automotive client systems and data.

The Challenge

UK's largest digital automotive marketplace faced increasing threats to its digital assets, including phishing attempts, unauthorized access, and credential/data leaks. The challenge was amplified by the need to differentiate between actionable and non-actionable alarms across a large volume of alerts.

Our Approach

- Our approach was innovative and comprehensive. HancoCyber implemented:
- Monitoring and flagging domains within actionable criteria.
 - Investigating suspicious domains for phishing activity or malicious intent.
 - Providing clear escalation protocols for actionable alarms.
 - Offering detailed reports and recommendations for remediation.

Results & Benefits

- A significant reduction in false-positive alarms.
- Proactive mitigation of potential phishing and data exfiltration threats.
 - Enhanced visibility into industry-specific and supply chain threat activity.
 - Improved alignment of security operations with internal processes.

Ready to transform your IT Security Operations? Contact us to find out more about HancoCyber's XTI and Monitoring service today to explore customised security solutions that drive efficiency, cost savings, and operational excellence.
